

**CASE STUDY:  
WOOLSHED BREWERY**

# Crafting Excellence: How Davey Pumps and Fresh Water Systems Power the Woolshed Brewery

In the picturesque Riverland region of South Australia, the Woolshed Brewery has garnered a reputation for crafting exceptional beers that tantalize the taste buds of discerning beer enthusiasts. Housed in a beautifully restored 1920s woolshed, this iconic brewery combines tradition and innovation, creating a unique ambiance that complements its award-winning brews.

At the heart of the Woolshed Brewery's operations lies a commitment to using the finest ingredients and state-of-the-art equipment. Two key elements of their setup are the reliable pressure pumps supplied by Davey and the advanced filtration systems provided by Fresh Water Systems.

## Precision, Consistency, and Purity: The Foundations of Great Beer

### THE PROJECT

The brewing process is a delicate balance of art and science, requiring consistent flow and accurate pressure levels. Davey's high-performance pumps and Fresh Water Systems' filtration solutions work in tandem to ensure that every step of the production process, from cleaning to sanitation, is executed with precision.

The brewmasters at the Woolshed Brewery rely on Davey's pumps to maintain the optimal conditions required for their operations, while Fresh Water Systems' filtration technology plays a crucial role in water treatment for process water, cleaning, sanitation, and wash down purposes.

*It's important to note that while the filtered water is essential for these processes, it is not used as an ingredient in the beer itself.*

## Tailored Solutions for Craft Breweries

Recognising the unique needs of craft breweries, Davey and Fresh Water Systems offer a range of solutions specifically designed to meet the demands of small-batch production. From compact, energy-efficient pumps to heavy-duty, industrial-grade models, and advanced filtration systems tailored to the specific water quality requirements of the brewery, Davey and Fresh Water Systems cater to breweries of all sizes and production capacities.

"Davey's pumps and Fresh Water Systems' filtration technology have been an integral part of our brewing process," says Head Brewmaster Jackson Beavis. "Their combined efforts have allowed us to maintain the highest standards of quality in our production processes, ensuring that every aspect of our operation contributes to the excellence of our final product."
